

## Placement of BirdBuffer® is Easy— Installation is quick

Placement of the BirdBuffer can be so simple. Use of the prevailing wind in this installation sweeps from right to left, taking the vapor from this hidden installation under the overhang, straight to the food court where people are eating and enjoying their food.

Pigeons used to hang on the eaves, ledges and perimeter of the building. Not anymore.

All you need is electrical power, a bracket and someone to fill it once a month.

The newest model of BirdBuffer® Q2 is the cleanest on the market today. Now more than ever the need for clean and safe bird control is replacing the old Avitrol poison for controlling birds.

Another step toward Green is the reduced energy usage and quiet operation of the machine.

Coverage of larger areas are possible with adjustable timers and time of day clocks. The no-drip machine that cannot be overfilled does what it's supposed to do...keeps birds away!

BirdBuffer® LLC, the company located near Seattle, will be able to offer you a discount if you can complete the Installation Plan. Look at other benefits and savings when shopping for bird control.
