

SUPER BIRDBUFFER FOR ACRES OF BIRD CONTROL

Best position: Setting high above the trees—upwind

Specifications:

- P/N 800095 Gas operated unit
- P/N 800085 230vac electric model unit (3.5 hp)
- 5000 cu ft of air / min mixed with MA vapor
- Low consumption of MA fluid (one gal./week)
- Automatically starting Gas operated engine for field use on timer
- Doesn't leave any residue of grape concentrate (Rejex-It Fog Force)
- Can use all during picking and harvest without residue
- Automatic start/stop function utilizes one gallon fluid / month
- Mounting on trailer for ease of field use.
- 18 gal. gas tank / 3 gal. MA tank
- Triple head output highest ever
- 9 hp. Engine
- Immediate coverage of 2 acres to ½ mile with wind movement
- Low/light grape smell easy for workers
- Easy change filters for air intake (once/mo)

Things to consider:

- Best when mounted higher than top of trees
- Recharging generator not included (needs recharge of battery)
- Needs to be anchored down for security
- Locking cap for the gas tank not included
- Lightweight trailer tongue not for highway
- To transport, disassemble head and intake manifold

Incorrect Position:

This position is too low and doesn't allow the vapor to travel over the top of the trees. Moving the unit to a higher location allows the vapor to travel much further (above).

The filters on the back of the unit keep out dirt and bugs (left end).

Double batteries allow the unit to start and stop for 3 days without a charging. It runs for 30-40 minutes per hour, vaporizing 3 minutes each 4 minutes. Shuts off at night...auto-start in the morning usually 4:30am

Specifications:

- Dims: 84" h x 54" W x 100" L
- Weight: 625 Lbs.
- Trailer Clearance: 9"
- Detachable parts: Filter, upper head and fluid tank
