

SUCCESSFUL BIRD CONTROL IN OPEN SPACES LIKE A LUMBER YARD

A lumber yard had a bird control issue that just wouldn't go away. They inquired about the Bird Buffer® for Bird Control.

Netting and spikes just weren't an option in such an open, busy area. The birds were flying in and out of the open warehouse doors, day and night as well as forklifts accessing the material.

At one point there was such an accumulation of droppings that you couldn't see the floor or the eye-wash station. By setting up the Bird Buffer® on the shelf pointing out door, the entire entrance, covered area outside and the interior warehouse created a vapor barrier that prevented birds traveling through.

Here the operations manager is shown overseeing the installation of the Bird Buffer. "Before the Bird Buffer, bird control problems caused a great deal of droppings in the warehouse where employees work. The Bird Buffer installed outside the door of a warehouse was timed for daytime operation. Once bird control of the pigeons (day setting) was accomplished, an owl required the settings for night. It worked. One Bird Buffer® gained bird control in the entire area and eaves.

Two years of Bird Buffer bird control has continued to guard the warehouse. The lumber company's industrial safety officer examined the EPA docs for safety. A grape aroma without harm to people, equipment or even the birds was approved.

With air movement going into the warehouse door, the wind caused enough vapor inside the warehouse for bird control in the entire open storage and warehouse area.

Pest Control Operator pointing to Bird Buffer location in front of the open area with air movement going inside the warehouse

The operations supervisor said, "We found the 96% guaranteed bird control to be exactly what was promised. I've told other offices about your unit. Because it doesn't harm anyone or anything, we continually use the Bird Buffer."

Bird Buffer just outside with wind going into the warehouse

Keeping a clean area is extremely important safety issue. Birds may continually revisit, but as long as the Bird Buffer is operational, the birds stay away. The cycle-timer keeps it dry, uses less fluid, cost effective while conserving on electricity. The blower sounds like an air-conditioner, yet the vapor invisibly creates large areas of bird control.

If you've tried everything to gain bird control and are just frustrated with no results, try the Bird Buffer. Bird Buffer guarantees 96% bird control in open spaces. Ask for bird control that's guaranteed. Request a brochure www.birdbuffer.com. For faster response, call 1-866-557-4274
