

INTERNATIONAL RETAILER ACHIEVES SUCCESS WITH BIRD BUFFER™ NATURAL BIRD CONTROL

PROBLEM:

- ✓ Eating area was targeted by crows, pigeons, ducks, and sparrows. The store tried many types of bird control solutions, such as netting, squawk box, and spikes.
- ✓ Previous types of bird control pushed the birds down to the eating tables affecting the public even more.
- ✓ The bird droppings were cleaned daily to alleviate contamination, defacing property, by hosing down the area.
- ✓ Both employees and customers were affected by nuisance birds & bird droppings.

SOLUTION:

- ✓ Installation questionnaire with plot plan was completed by retailer
- ✓ A can of Windicator haze was sprayed in the air to determine wind direction for proper placement
- ✓ Bird Buffer is mounted high, out of sight, and filled with MA by PCO (pest control operator)
- ✓ Timer is set, invisible haze is aimed away from building, up wind to target areas front of store

96% OF THE BIRDS WERE GONE WITHIN A 2 WEEK PERIOD
