Joe Glavach, Manager of Purchasing and Food Safety

RE: Food Safety Certification

We are happy to report that after having the Bird Buffer System operational for several months, we have eliminated the roosting 100% and have gotten rid of the last 10% of birds. We passed our Food Safety Inspection. The Primus Lab inspection report said and I quote, Auditor question: "Are plant and storage areas free of insects/rodents/birds or any evidence of them? Answer: Yes. All areas of the facility are protected from the presence of birds with a very effective system that repels them."

A copy of our certification is attached.

Now after several months of using this system, we are able to turn down the output (lower consumption of fluid) to maintain enough haze to warn new birds that might "test" the food plant, that there is no "free lunch here." Mr. Crawford of GBS, Inc. has been in touch with us and kept us informed of any new settings that we should adjust on the equipment. Their support has been consistent with the quality of their product.

This system is operational during work hours with over 450 employees, successfully. The birds have not habituated to this system either. The bird population stays away by the hundreds. This included, blackbirds, pigeons, doves, and other local birds that were previous pests in our food packing plant. A side benefit is the packing area has a pleasant grape odor throughout the complex.

Thank you GBS, Inc. for your system and support. This system works.

Independent Lab Certifies Food Safety With Bird Buffer

The Bird Buffer™ nano-technology has received recognition from an independent laboratory for successful bird control in open spaces of a food packaging facility. Thomas Produce facility has been trying for over 25 years to solve bird control.

The health and safety Certification from the independent testing laboratory of Primus Labs.com reported and I quote from the question:

”All areas of the facility are protected from the presence of birds with a very effective system that repels them.”

Recognized by the FDA and USDA, a copy of the certification is attached as well as the letter.

The Bird Buffer has successfully stopped birds from coming to the food packaging facility by reducing roosting 100%. During the inspection, no birds were found in the building during packing season with over 450 employees working with food in the facility. The 3 football field size building was free of birds at last.
