Invisible Protection... Visible Results.®

Silent Thermal Fogger

Immediate Response!

BirdBuffer's Thermal Fogger silently produces a bird-repelling vapor that encourages birds to leave the area quickly. Combine the non-electric fogger with the automated BirdBuffer® Q3 and follow BirdBuffer's recommended strategy and even the smallest of birds will find other places to roost and nest. The handheld fogger gets birds to leave right away and the BirdBufferf Q3 keeps them away.

The Thermal Fogger is easy to use. Simply add BirdBuffer approved fluid to the canister, attach propane, warm up for 4 minutes and you can produce a light fog on the target area. The Thermal Fogger is the perfect tool for humane and effective avian relocation, especially when parted with automated BirdBuffer Q3 or TD.
